

Beek, the Netherlands, 12th of November 2021

Our ref.: GreenPort FST

To Whom It May Concern

Dear Sirs,

For UL certified fixed installation you can certify the product because of the following:-

For fixed installations you know the volume of the room, you know the fire class and also you have to factor in any openings as part of the design calculation.

Knowing these facts there is a design concentration that can be calculated which is all part of our UL certified GreenSol Design & Calculation Manual.

For a portable unit (GreenPort FST) you do not know the volume of the room, how long the fire has been going for and what fire class you are dealing with and what the potential openings are.

You cannot make a standard based on these imponderables.

However I can confirm that the GreenPort FST uses the same components and is a EPA Snap listed aerosol compound (Aerosol A) as our UL certified GreenSol Fixed suppression units.
